SOFTWARE CHANGE IMPLEMENTATION REPORT

CR-019: Student Profile Editing

Field	Details
Change Request ID	CR-019
Change Request Title	Student profile editing
Student Name	N. Bavanika
Student ID	JFICT24_19
Implementation Status	Completed
Date	29 October 2026

1. Change Request Summary

1.1 Business Requirement

Currently, the Student Management System allows an authenticated student to view their own profile through the Student Dashboard, but there is no student-facing facility to edit the displayed profile information. The system should allow a student to update their own email address and phone number without administrator assistance.

1.2 Existing Behaviour

- StudentDashboardPage.jsx loads the authenticated student's profile using GET /api/students/me.
- The My Profile section displays registration number, full name, email, phone number and member-since date.
- The displayed profile information is read-only; no Edit Profile button or student update form is available.
- The existing PUT /api/students/:id update route is protected for ADMIN users and is intended for administrator updates.
- Student authentication is handled by the existing JWT authentication middleware.

1.3 Requested Change

- Add a student-facing Edit Profile facility to the My Profile section. The implementation must:
- Add an Edit Profile button to StudentDashboardPage.jsx.
- Provide a form for editing the student's email address and phone number.
- Pre-populate the form with the student's current values.
- Validate email and phone number before submission.

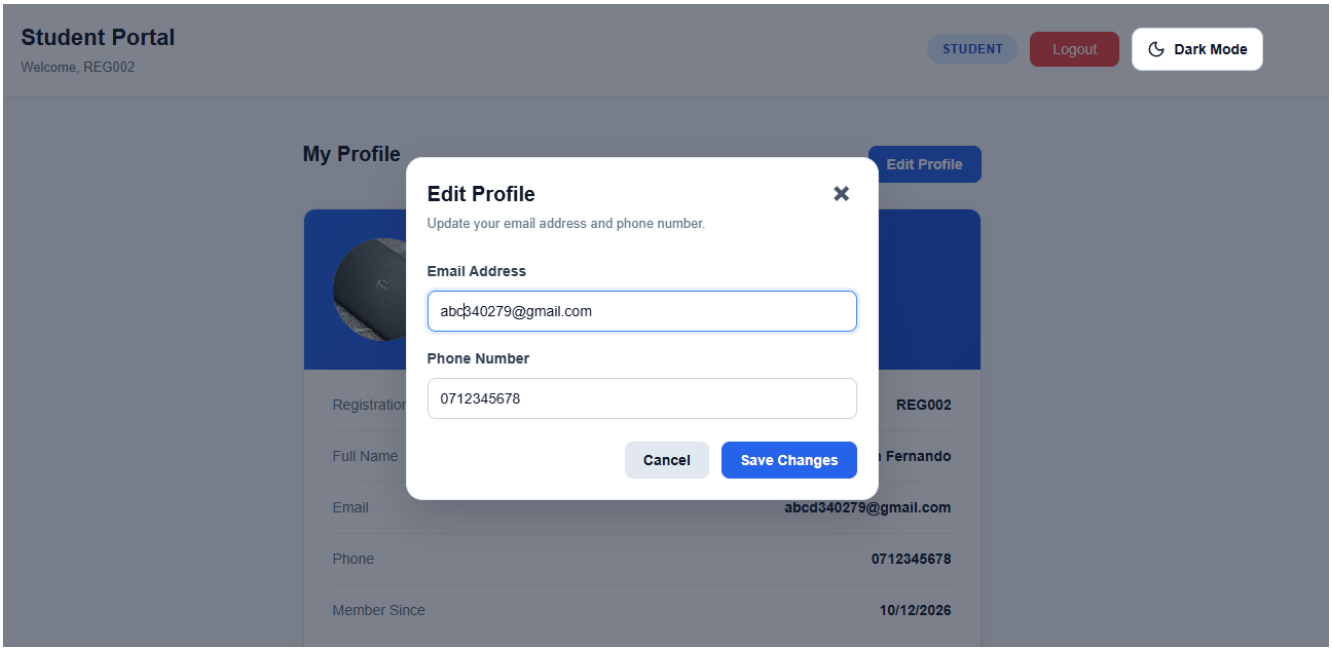

- Add a student-authorized profile update API, preferably PUT /api/students/me, rather than exposing a student_id for self-update.
- Identify the student from the authenticated JWT userId.
- Update only the authenticated student's existing record.
- Return a clear success or error response.
- Refresh the displayed profile information after a successful update.
- Preserve the existing GET /api/students/me profile retrieval behaviour.
- Preserve existing administrator CRUD and authorization behaviour.

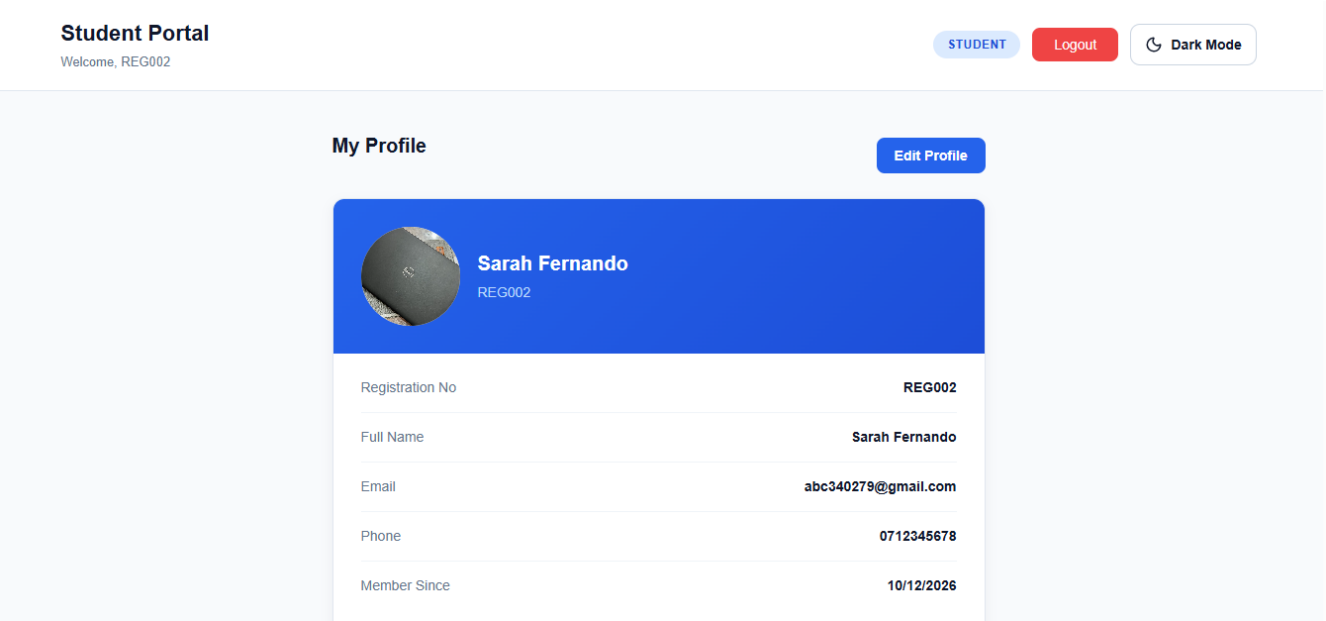

2. Implementation Details

2.1 Files Modified or Added

File	Purpose
backend/src/controllers/studentController.js	Adds validation and logic for students to update their email and phone number
backend/src/routes/studentRoutes.js	Adds authenticated students only PUT/api/students/me
frontend/src/pages/StudentDashboardPage.jsx	Adds the edit profile button, prefilled form, and save flow. Also includes the missing state fix for the blank dashboard issue
frontend/src/styles/studentDashboard.css	Add styling for the profile edit form/modal and dark theme

5. Evidence to Attach

6. Final Result

CR-019 adds a student self service profile editing feature. Students can update their email address and phone number from the dashboard using a prefilled form. The backend validates the submitted values, checks for duplicate email address, and updates both the student profile and account email. Access is restricted to the authenticates students own profile.
